

SafeZone Adjustable

Light to medium duty work trucks that operate in compact areas.

THE NEWEST ADDITION TO THE REARSENSE SAFETY FAMILY

- ▶ Detects objects in blind spots
- ▶ New touchscreen display
- ▶ Adjustable coverage area

Our blind spot safety and object detection radar systems are designed to detect objects in zones hidden from the operator's view.

Our patented radar systems detect moving and stationary objects in an operator's blind spot, helping them avoid accidents.

The new wireless system has the added benefit of having an adjustable range, from 3-6m behind the vehicle and can be adjusted from the touch screen display.

It is still as rugged as the rest of our family of proximity detection products. With its robust touch screen and consistent detection zone, regardless of the environment, operators can rest assured they have the best blind spot detection system available.

KEY FEATURES

- 1 **Adjustable by the operator**
Adapt to changing conditions
- 2 **Touch screen display**
gives strong visual + audio warning
- 3 **Robust construction**
for demanding environments
